

Hello, my name is Oleksii Makovetskyi, I am 31 years old.

For the last year of my life, in parallel with my main work, I have been studying web development. This topic has always been interesting to me, since early childhood, when I was tweaking the code in the computer game GTA to change the appearance of the cars in the game. Since I started working at an early age, work (in various companies related to finance, business, accounting, and sales) quickly absorbed me, and then I did not dare to change my field of activity, since I've achieved some success.

And for this year, as much as I have been studying web development, I have become even more convinced that the technology sector is exactly what I want to do in the future. I am very inspired by modern technologies and programming tools, the possibilities they open up for developers, and how much they affect people's lives.

At the moment, I have worked with such technologies as:

- React / Next.js
- Java Script / Node.js
- MongoDB / mySQL
- HTML / CSS
- Bootstrap / Tailwind
- Git / GitHub

During my studies, I had the opportunity not only to study the theoretical aspects of each of the technologies, but also to implement them in my projects.

Despite the fact that the last 8 years of my life I worked in companies that were not directly related to the technology sector, I know that I will be useful for your company, and my previous experience will allow me to solve future tasks. My purposefulness, determination and ability to learn well will allow me to quickly become part of your company and effectively perform the assigned tasks.

At the interview, I could tell you more about myself, answer your questions, discuss the possibility of working in your company and convince you that I am exactly the person you need. If I am not suitable for this position at the moment, I would appreciate it if you would save my resume for future possible vacancies.

Best regards,

Oleksii Makovetskyi
